令和７年度個別学力検査問題
（国際資源学部，教育文化学部，
医学部保健学科，情報データ科学部）

英　　語

前　期　日　程

注　意　事　項

1　試験開始の合図があるまで，この問題冊子の中を見てはいけません。

2　この問題冊子は，13ページあり，問題はⅠからⅢまで3題あります。解答用紙は3枚あります。

3　試験中に問題冊子の印刷不鮮明，ページの乱丁・落丁および解答用紙の汚れ等に気付いた場合は，手を挙げて監督者に知らせなさい。

4　監督者の指示に従って，解答用紙に受験番号と氏名を記入しなさい。

5　解答は，解答用紙の該当欄に記入しなさい。

6　配付された解答用紙は持ち帰ってはいけません。

7　試験終了後，問題冊子は持ち帰りなさい。

I Read the passage below and answer the questions. For all the questions, write the letter (A), (B), (C), or (D) on your answer sheet by choosing the most appropriate one from the given choices.

[1] I bet that you remember the exact moment that it happened. Maybe it was a book you read or a movie you saw. A piece of food; a piece of music; a piece of art. Looking forward to fifth-period Spanish class. Having a secret (or not-so-secret) crush on your school's foreign exchange student. However it happened, whenever it happened, you knew — you *absolutely knew*. There's a big world out there: fascinating, diverse and just waiting for you to go out and explore it. You might not have known, at that exact moment, what that would mean in practice, but you were certain that your life would never be the same again. Maybe you just pointed to a globe and said "There. That's where I'm going to work." Or maybe you had absolutely no idea what to do with your interest other than to nurture it and watch it grow.

[2] If you ask my friend Todd Robinson, he'll tell you his own version of that story. As he puts it, "I always dreamed of travel and faraway places as a child. Some of my earliest memories are of wanting to visit places that I had read about in my books and to learn the different languages. Other kids wanted to drive fire trucks, or arrest the bad guys. I wanted to be an interpreter at the United Nations." Today, his business card reads 'US Ambassador to the Republic of Guatemala'.

[3] If it wasn't **the glittering promise of world travel**, maybe it was **the grim reality of a genuine social injustice** that, one day, came crashing into your field of vision. My friend Victoria Stanski will tell you that her moment came on a trip she took as a 12-year-old with her family to South Africa, during apartheid*1. As she recalls: "Having grown up in California, I couldn't understand why people were being treated differently, *and brutally*, just because of the color of their skin."

[4] Janell Wright, on the other hand, describes her college summer job in rural Honduras as her 'wake-up call'. It was meant to give her some 'real world'

experience in a hospital environment before she went off to med school — but she never anticipated just how eye-opening it would be. "I saw field laborers come to our hospital with fertilizer poisoning*2 because they weren't being provided with masks and gloves. Being poisoned kept them away from work for days or even weeks — and that meant they wouldn't be earning enough to feed their families. That's the moment I discovered my passion for *preventative* medicine: teaching vulnerable people how to take steps to ensure that they, and their families, didn't fall prey to avoidable illnesses."

[5] For me, **the 'ah-hah moment'** was while I was writing a book report in the sixth grade on the Amazon rainforest. I grew up in Oregon, which is stuffed full of the most beautiful mountains, forests and rivers. That book report brought me face-to-face with the idea that there were actually people out there *destroying* the environment, just like the one out my window, the one I loved so much. And not only that, but people out there were suffering as a result: losing their homes, losing their livelihoods. Two questions kept circling around my mind: *Why is this happening? And what can I do to help?*

[6] None of us realized, at the time, that what we were really doing was laying the foundations of a life focused on global social and environmental justice. And yet here we all are today. Victoria works as a program advisor for humanitarian non-governmental organizations, Janell is a public health specialist in Kazakhstan and I'm the Director of Sustainable Development at the US Agency for International Development in Armenia. We all do interesting, challenging work, all in the name of making the world a better place for everyone that lists 'Planet Earth' as their home address.

[7] If you're anything like I was, you're looking for a way — any way — to get involved on a global scale. That's lucky, because now, more than ever, we need dedicated and talented people rolling up their sleeves to tackle some of the biggest challenges of our age. And if you like challenges — **you're spoiled for choice**. Global poverty, growing income inequality, civil war, displaced populations, gender inequality, nuclear proliferation, ethnic wars, infectious diseases, human trafficking*3, infant mortality, environmental degradation,

sectarian violence, land grabs, intergenerational trauma, natural disasters... the list is far longer than it has to be.

[8] These issues may seem **overwhelming**, but don't be discouraged. We're making progress on lots of things: immunization rates are up; literacy rates are up; absolute poverty is falling. Positive and lasting change takes time to create, but we're definitely headed in the right direction. Here's another thing to celebrate: the list of organizations whose mission it is **to put these problems in a museum** is huge. There are local organizations and regional organizations. There are national, multinational and international organizations. You might already have an inkling*4 that the landscape of international affairs is varied and complex — but you're about to find out that the landscape of **global players** (read here: potential employers) is *just as varied and complex*. Collectively, they employ the best talent across a vast range of disciplines — from accountants to zoologists, and everyone in between. What this means for you is that somewhere out there, your perfect job is waiting for you.

[9] Here's my goal. Whatever your starting point, whatever your interest in global affairs — I want to help you turn your passion into a career. Figuring out where to start, and what your options are, can be daunting. Trust me. I know. Then again, there's an old Chinese proverb that says: *to know the road ahead, ask those coming back*. I want to share the wit and wisdom of those who know that road like the back of their hand. You're never too young (or too old!) to start down that road, and believe me it will twist and turn in ways you'd never expect. And that's okay. In fact, it's more than okay, because frankly, you're in for the ride of your life.

出典：Lyla Bashan, *Global: An Extraordinary Guide for Ordinary Heroes* (Red Press, 2017) (一部改変)

apartheid*1 ＝南アフリカ共和国における人種隔離制度
fertilizer poisoning*2 ＝化学肥料による中毒
human trafficking*3 ＝人身売買
inkling*4 ＝うすうす知っていること，わずかな自覚

問 1 According to Paragraph [1], complete the statement below:

The author expects the reader to remember _____.

(A) that the reader has read books and seen movies

(B) where the reader will work in the future

(C) that the world is out there for the reader to explore

(D) that the reader has no idea about the world

問 2 Whose story is an example of **the glittering promise of world travel** mentioned in Paragraph [3]?

(A) Todd Robinson

(B) Victoria Stanski

(C) Janell Wright

(D) the author

問 3 Whose story is an example of **the grim reality of a genuine social injustice** mentioned in Paragraph [3]?

(A) Todd Robinson and the author

(B) Victoria Stanski, Janell Wright and the author

(C) Todd Robinson, Victoria Stanski and Janell Wright

(D) Todd Robinson, Victoria Stanski and the author

問 4 Which of the following is most appropriate as an explanation for **the 'ah-hah moment'** in Paragraph [5]?

(A) a time for students to write in schools in the US

(B) a time when one needs to study for an exam

(C) a time when one suddenly realizes something

(D) a time in sixth-grade social studies

問 5 According to Paragraph [6], which statement is the most appropriate?

(A) The author and her colleagues have lost their nationalities.

(B) The author and her colleagues knew the meaning of what they were doing from the start of their careers.

(C) Unlike the author, her colleagues did not realize the significance of their experiences.

(D) The author and her colleagues pursue different careers to achieve global justice.

問 6 Which of the following is closest in meaning to the phrase **you're spoiled for choice** in Paragraph [7]?

(A) You have many things to choose from.

(B) You indulge yourself in choice words.

(C) You choose the right thing very quickly.

(D) You tend to make wrong choices.

問 7 Which of the following is closest in meaning to **overwhelming** in Paragraph [8]?

(A) abstract

(B) insignificant

(C) unbearable

(D) satisfactory

問 8 What does the phrase **to put these problems in a museum** in Paragraph [8] mean?

(A) to open a special exhibition devoted to the problems

(B) to solve the problems and move forward

(C) to make the problems worthy to be proudly displayed

(D) to cooperate with public facilities to deal with the problems

問 9 What does **global players** in Paragraph [8] refer to?

(A) academic people all over the world who major in various disciplines

(B) various organizations that try to overcome global problems

(C) various multinational corporations that have great influence in the global market

(D) a variety of talented people trying to find the right jobs for themselves

問10 According to Paragraph [9], complete the statement below:

The author expects the reader to _____.

(A) prepare to make a good career in the domestic labor market

(B) refrain from looking at the world from an optimistic perspective

(C) seek whatever employment may be available in the home country

(D) turn an enthusiasm for global affairs into a career in the global village

II Read the 2023 newspaper article below and answer the questions. For all the questions, write the letter (A), (B), (C), or (D) on your answer sheet by choosing the most appropriate one from the given choices.

Title: Record heat shows need to _____

[1] Japan has been gripped by sweltering summer heat, and actions are needed to protect the lives and health of people living in today's world. (a)( ), efforts to curb global warming should be stepped up for the future health of the planet. Japan just had the hottest July in recorded history. Scorching heat waves have been sweeping the world.

[2] "Climate change is here. It is terrifying. And it is just the beginning," warned United Nations Secretary-General António Guterres*1, who declared "the era of global boiling has arrived." Guterres **called for** "dramatic, immediate climate action" by countries.

[3] In recent years, it has become possible to quickly calculate how the rising temperature of the Earth is causing climate disasters by using supercomputers. Climate scientists conduct analyses of whether and how climate change is contributing to the intensity and frequency of extreme weather such as torrential rain and violent heat by using modeling that simulates the likelihood and intensity of the weather event.

[4] In their analyses, scientists utilize two "worlds": today's world with global warming, and a **hypothetical** world without human-caused climate change. They compare observations of current weather to repeated computer simulations of "a world that might have been without climate change."

[5] A group of climate scientists recently said their study using this technique shows the heat waves that simultaneously broiled the southwestern United States and southern Europe this summer would have been "virtually impossible" if it were not for global warming. It is crucial for the entire world to confront the grim reality of climate change and tackle the challenge head-on.

[6] A report released this year by the U.N. Intergovernmental Panel on Climate Change (IPCC)*2 warned that the world is likely to pass a dangerous temperature threshold — limiting warming to 1.5 degrees Celsius above preindustrial temperatures — within the next 10 years. With a temperature rise of 1.5 degrees, heat waves of the sort that occurred once in 10 years on average in a climate without human influence would likely occur 4.1 times more frequently, according to the report.

[7] But the temperature has already risen 1.1 degrees and the increase will surpass the 1.5 degrees mark by 2030 if greenhouse gases continue being emitted at the current rate. "The choices and actions implemented in this decade will have impacts now and for thousands of years," the report said.

[8] There are two categories of measures to deal with challenges linked to climate challenge — adaptation and mitigation. The former type of measures are basically responses to the phenomena of the increase in world temperatures caused by greenhouse gases, while the latter are steps to stem*3 the warming of the planet.

[9] During a spate of blistering heat, it is vital to keep the body hydrated and stay cool by using air conditioning properly. It also helps to build a society that allows avoiding going outside during the hottest time of the day as much as possible. It is also critical to expedite efforts for mitigation for our and our offspring's futures. This means trying harder to reduce the global emissions of greenhouse gases by expanding the use of renewable energy.

[10] But progress in slashing heat-trapping gasses has been glacial*4. Changes in the global energy situation due to Russia's aggression against Ukraine have only worsened things. Japan's decarbonization policy has been focused on ramping up nuclear power generation. But it would be a mistake to remain dependent on atomic energy because of the many tough challenges involved, including risks of serious nuclear accidents and disposal of radioactive waste.

[11] Experts have pointed to problems related to **<u>use of renewable energy sources</u>**, such as negative impacts on wild animals and greater landslide risks. But there is still much that can be done. There is, (b)(　　), much room for installing solar panels onto buildings and houses and in abandoned farmland. Researchers are working on the technologies to develop thin film solar cells that can be installed on wider kinds of surfaces.

[12] There have been growing cases where major electric utilities required to purchase output from renewable energy facilities through the feed-in tariff (FiT) system*5 temporarily halt electricity produced from solar sources from feeding into the grid*6 due to limited grid capacity.

[13] It is urgently needed to create effective systems to store power generated by clean energy and enhance the capacity of the transmission and distribution networks. Locally produced electricity from solar and wind power also helps improve the nation's preparedness for natural disasters. All-out efforts should be made to ensure rapid expansion of renewable energy that is produced in Japan.

grid*6＝配電網

問 1 Choose the most appropriate phrase to complete the following title of this article:

Title: Record heat shows need to _____

(A) protect the present lifestyles of the developed world

(B) learn from past civilizations

(C) mount renewable energy push

(D) increase nuclear power generation

問 2 Which of the following would be most appropriate for (a)(　　) in Paragraph [1] and (b)(　　) in Paragraph [11]? Each choice can be used only once. **(なお，文頭に来る語句も小文字で示してある。)**

(A) alternatively

(B) at the same time

(C) by contrast

(D) for example

問 3 Which of the following is closest in meaning to **called for** in Paragraph [2]?

(A) demanded

(B) prohibited

(C) recalled

(D) took care of

問 4 Which of the following is closest in meaning to **hypothetical** in Paragraph [4]?

(A) actual

(B) ideal

(C) impossible

(D) past

問 5 According to Paragraph [5], complete the statement below:

The climate scientists would argue that the 2023 heat waves _____.

(A) occurred independently of global warming
(B) were unpredictable even after repeated computer simulations
(C) would not have occurred in the absence of global warming
(D) were observed more frequently before climate change

問 6 As for the meaning of Paragraph [6], which of the following is most appropriate?

(A) If greenhouse gas emissions continue at the current rate, the temperature increase will surpass the 1. 5 degrees mark after 2030.
(B) The temperature has already reached 1. 5 degrees Celsius above preindustrial temperatures.
(C) With a temperature rise of 1. 5 degrees, heat waves may occur 4. 1 times more often.
(D) The impact of a temperature rise of 1. 5 degrees is only a problem for now and not for the future.

問 7 According to Paragraph [10], which statement would the author most likely agree with?

(A) Ramping up nuclear power generation needs to be prioritized to achieve decarbonization.
(B) Moving away from nuclear energy may not be an effective solution for Japan's decarbonization policy.
(C) The risk of serious nuclear accidents and the problem of radioactive waste will be solved in the very near future.
(D) It is not wise for Japan to boost its dependence on nuclear energy as a way to cut greenhouse gasses.

問 8 Regarding **use of renewable energy sources** mentioned in Paragraph [11], complete the statement below:

To improve the use of renewable energy, _____.

(A) wild animals will have to suffer

(B) landslide risks will be increased

(C) solar electricity production has to be halted temporarily

(D) electricity networks need to be improved

問 9 Which of the following statements is **NOT** supported by the article?

(A) Russia's aggression against Ukraine has caused global energy situation changes.

(B) Major electric utilities have been growing because they have purchased renewable energies.

(C) Power generated by clean energy has been temporarily stopped at times.

(D) Generating solar and wind power locally is good for natural disaster preparation.

III The passage in Question I contains examples of people working in foreign countries. Do you want to do this in the future? Explain why you would, or would not, like to work in another country. Give two or three reasons for your opinion. Answer in English, in the form of a paragraph, in about 120 words.
